Profile Summary

DevOps Engineer with 4+ years of experience in cloud infrastructure, CI/CD automation, and containerized deployments. Hands-on with AWS, Terraform, Docker, Kubernetes, Jenkins, and Ansible to build scalable, secure, and reliable systems. Experienced in monitoring, incident response, and automation across production environments, with a strong background in database platforms and infrastructure troubleshooting, focused on reliability and operational excellence.

Technical Skills

Cloud: AWS (EC2, S3, IAM, Lambda, VPC)

IaC & Automation: Terraform, Ansible.

CI/CD: Jenkins, Git

Containers and Orchestration: Docker, Kubernetes

Monitoring: Grafana, Prometheus, CloudWatch

Databases: Oracle, MySQL

Programming/Scripting: Python, SQL, Shell scripting

Operating Systems: Linux

Experience

Infosys

sep 2025 -Present

Senior associate consultant

Pune, Maharashtra

- Designed and implemented end-to-end CI/CD pipelines in Jenkins for multiple microservices, reducing deployment time by 50%.
- Automated Docker image building and deployment, using multi-stage builds to reduce image size by 60% and ensure faster container spin-up.
- Created Grafana dashboards and integrated Prometheus/CloudWatch metrics for database and infrastructure monitoring, improving visibility across 5+ production systems and enabling data-driven decision-making.
- Designed and implemented Jenkins Shared Libraries to standardize pipeline steps across multiple projects, enabling code reuse and reducing duplication.
- Developed parameterized Jenkins jobs for multi-environment deployments, improving release reliability and consistency.
- Integrated Terraform workflows for AWS resource provisioning in hands-on lab and project environments.
- Applied container security best practices with Trivy scans in CI/CD pipelines.

Amodocs

Software developer

July. 2022 – sep 2025

- Developed a Jenkins-based automated deployment pipeline that automatically staged changes from every code commit and applied, cutting manual upgrade effort by 70%.
- **Automated Deployment Processes:** Designed, coded, and tested automation scripts using Bash and Python to streamline deployment processes and improve system performance.
- **Debugged and Resolved Issues:** Identified and fixed software defects and performance issues, ensuring smooth and reliable operation of applications
- Led cross-team incident management and RCA processes, improving MTTR by 25%.
- Monitored and managed high-availability production infrastructure, lowering escalations by 25% and improving system reliability.
- Automation/Monitoring Focus- Implemented monitoring and alerting solutions to proactively detect issues, reducing manual intervention and improving response times
- Provided L2/L3 production support by monitoring critical applications, troubleshooting incidents, and ensuring minimal downtime for business services

Projects and Certifications

Infrastructure-as-Code Driven VPC and EC2 Deployment with Secure Routing | *AWS, VPC, Subnets, NAT Gateway, Terraform*

- Designed and implemented a multi-tier VPC architecture with public/private subnets, NAT Gateway, and secure routing to ensure network isolation and security.
- Automated provisioning of EC2 instances, databases, and networking components using Terraform, enforcing least-privilege access and repeatable infrastructure setup.
- Integrated the Terraform deployment with a CI/CD pipeline (GitHub → Jenkins → AWS), enabling fully automated infrastructure provisioning and reducing manual setup time.
- Implemented monitoring and alerting hooks in the CI/CD pipeline to validate infrastructure changes and ensure deployment reliability.

Kubernetes-Based Microservices Deployment with Observability & Auto-Scaling | *Kubernetes, Ingress, Prometheus, Grafana*

- Deployed 5+ containerized services on Kubernetes using Deployments, Services, and Ingress, enabling scalable and highly available application access.
- Implemented resource requests/limits and HPA, handling 2-3× traffic spikes and validating automatic pod recovery within seconds during failure scenarios.
- Integrated Prometheus and Grafana to monitor 10+ cluster and application metrics, reducing issue diagnosis time by 40% through proactive observability and kubectl-based debugging.

Hackathon Project – End-to-End CI/CD & Container Security | *Docker, Jenkins, Trivy, Nginx, Git*

- Deployed a full-stack app in 3 days with multi-stage Dockerfiles (60% smaller images) and Trivy vulnerability scans.
- Designed a Jenkins pipeline for automated CI/CD, reducing deployment time by 50% and ensuring reliable delivery.
- Received mentor recognition for delivering a complete deployed solution.

Kubernetes-Based Deployment of Containerized Web Application | *Kubernetes, Docker, Jenkins*

- Deployed a containerized Flask application on Kubernetes using Deployments and Services, enabling scalable and resilient application delivery.
- Configured ConfigMaps and Secrets to manage application configuration and sensitive data securely.
- Implemented resource requests and limits, replica scaling, and validated pod self-healing through failure scenarios.
- Performed hands-on troubleshooting using kubectl logs, describe, and exec to debug pod and service issues.

Certifications |

- AZ-900: Azure Fundamentals
- Kubernetes - Hands On
- AWS Certified Solutions Architect - Associate (In Progress)

Education

- Bachelor of Engineering in E&TC – Sinhgad college of Engineering – 2022
- HSC(CBSE) – Sainik School Satara, Satara – 2018
